

As a Licensed Amateur Radio Operator, I am concerned about the excessive RF noise that will be emanating from the unshielded power transmission lines. I do not think allowing this project to continue is in the best interest of Amateur Radio and am strongly opposed to its implementation. If this project continues significant steps need to be taken to assure non-radiation of RF signals from the power transmission lines, and as it would be cost prohibitive to string new line all over the country, I see no way to prevent the radiation from the transmission lines, therefore this project must not be approved or allowed to continue.
